Comfortable: MongoDB, Node.js, Express.js, Next.js, Typescript, Redux
Tools: VS Code, Dev Tools, GIthub, Vercel, Redux dev tools, Canva

---

MY JOURNEY

At the end of 2021, I began my journey with HTML and CSS, expanding into Bootstrap, PHP, and MySQL(basic). I freelanced with these skills until June 2023. During the freelance period, I have worked with raw HTML and CSS. Then I started learning front-end and basic back-end development in July 2023.

Afterward, I collaborated on some contractual projects. In particular, I got an opportunity to develop a 'data collection system' for around 200 primary schools that won first place in a divisional competition of the primary education department. That significantly enhanced my skills. These projects were a blessing for me. I have learned such knowledge that I couldn't learn without working on such real-world projects.

Currently, I am learning new technologies to become a proficient MERN stack developer.

MY WORKS IN CODE

Quill Academy
Online learning marketplace

Duration: 6 days
Client Code **Server Code** **Live Preview**

All-in-one online learning marketplace for seamless learning and teaching others.
Key features:
- Diverse user interface based on user role
- Authentication, Authorization & private pages
- Seamless payment with stripe
- Request to be an instructor, add courses, add assignments for teacher. Approve teachers, and courses, make admin, delete user, reject teacher, reject course, and many more options for admin. Students can enroll in courses, pay, submit assignments, and beyond.

Technologies I have used: Tailwind CSS(Daisy UI), React, Firebase, Node.js, Express js, and MongoDB

Sportify
Sport goods selling platform

Duration: 4 days
Client Code **Server Code** **Live Preview**

comprehensive e-commerce platform offering various sporting equipment and accessories.
Key features:
- Search, filter and sort functionality
- Authentication and private pages
- Ensures compatibility across various devices
- E-commerce functionalities

Technologies I have used: Typescript, React JS, Redux, Shadcn UI, Express JS, Mongoose, etc.

CERTIFICATION
